HOFFMANN GREEN CEMENT

Hoffmann Green Cement reported strong records for 1H 2026

Hoffmann Green reported a record turnover for the first half of 2026. Nearly 40,000 metric tons of green cement has been sold in the first half of 2026, which doubles the volumes from the same period last year. The company continued a strong sales momentum, while recording the 1000th production order for the H2 vertical factory in Bournezeau (photo). In 1H 2026 a total of 9 new commercial and industrial partnerships were signed. In June 2026 the company completed a private placement of around €5 m, bringing the company's equity to more than 60 million euros. This will be used to ramp-up production volumes, improve cost optimisation, fund the initial stages of the new H3 production site project and continue research and development efforts. The H3 site is scheduled to come online in 2029 in the Rhône-Alpes region.

Julien BLANCHARD and **David HOFFMANN**, Co-founders of Hoffmann Green Cement Technologies, said: "The first half of 2026 marks a new acceleration for Hoffmann Green. With nearly 40,000 tonnes marketed and delivered, more than double the volume achieved in the first half of 2025, we are demonstrating that our 0% clinker cements are meeting the expectations of a growing number of major players in the construction industry. Passing the milestone of the 1000th production order at the H2 vertical plant, signing nine strategic partnerships, and continuing to ramp up our industrial facilities illustrate the Company's ongoing scale-up. This strong momentum allows us to confidently confirm our target of 100,000 tonnes for the full 2026 financial year, with the second half traditionally being stronger than the first. The recently completed private placement gives us the resources to accelerate this trajectory, initiate the first stages of the H3 project, and strengthen our technological leadership in 0% clinker cements."
